Sequence 4, Application US/09632748

patent No. 6867179

GENERAL INFORMATION:
APPLICANT: Glichrest, Barbara A.
APPLICANT: Glichrest, Mark
TITLE OF INVENTION: METHODS OF INDUCING HAIR GROWTH AND
TITLE OF INVENTION: COLORATION
FILE REFERENCE: 0054.1087-010
CURRENT APPLICATION NUMBER: US/09/632,748
CURRENT APPLICATION NUMBER: PCT/US99/02362
PRIOR APPLICATION NUMBER: D99-02-03
PRIOR APPLICATION NUMBER: US 09/193,683
PRIOR FILING DATE: 1999-02-04
PRIOR APPLICATION NUMBER: US 09/793,683
PRIOR FILING DATE: 1995-08-30
PRIOR PLING DATE: 1994-08-31
NUMBER OF SEQ ID NOS: 11
SOFTWARE: FastSEQ for Windows Version 4.0

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Sequence 30, Application US/09724940

Sequence 30, Application US/09724940

Patent No. 6905666

GENERAL INFORMATION:

APPLICANT: Schenk, Dale B.

APPLICANT: Bard, Frederique

APPLICANT: Vasquez, Nicki

APPLICANT: Vasquez, Nicki

APPLICANT: Vacquez, Nicki

APPLICANT: Vacdnock, Ted

TITLE OF INVENTION: Prevention and Treatment of Amyloidogenic Disease

FILE REFERENCE: 15270J-004750UC

CURRENT APPLICATION NUMBER: US/09/724,940

CURRENT FILING DATE: 2000-05-26

PRIOR APPLICATION NUMBER: US/09/580,015

PRIOR FILING DATE: 1999-01-30

PRIOR FILING DATE: 1999-11-30

PRIOR FILING DATE: 1999-11-30

GENERAL INFORMATION:

APPLICANT: Maggio, John E.

APPLICANT: Mantyh, Patrick W.

TITLE OF INVENTION: LABELLED BETA-AMYLOID PEPTIDE AND

TITLE OF INVENTION: METHODS FOR USE IN DETECTING ALZHEIMER'S DISEASE
NUMBER OF SEQUENCES: 12

CORRESPONDENCE ADDRESS:

ADDRESSEE: Mueting, Raasch, Gebhardt & Schwappach, P.A.

STREET: P.O. Box 581415

CITY: Minneapolis

STATE: MN

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Patent No. US20020051988A1

GENERAL INFORMATION:

APPLICANT: Gilchrest, Barbara A.

APPLICANT: Yaar, Mina

TITLE OF INVENTION: METHODS FOR DIAGNOSING AND TREATING;

TITLE OF INVENTION: ALZHEIMER'S DISEASE;

FILE REFERENCE: BU96-09A2

CURRENT FILING DATE: 2001-05-29

FRIOR APPLICATION NUMBER: US/09/866,898

CURRENT FILING DATE: 1998-09-29

PRIOR PLILING DATE: 1998-09-29

PRIOR PLILING DATE: 1998-09-29

PRIOR PLILING DATE: 1998-03-29

PRIOR PLILING DATE: 1996-03-29

NUMBER OF SEQ ID NOS: 5

SOFTWARE: FastSEQ for Windows Version 3.0

LENGTH: 10
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   SOFTWARE: Patentin Release #1.0, Version #1.30 CURRENT APPLICATION DATA:

Sequence 131, Application US/10619454
Publication No. US20040091945A1
GENERAL INFORMATION:
APPLICANT: Mindeet
APPLICANT: Fitzer Attas, Cheryl
APPLICANT: Chain, Daniel
TITLE OF INVENTION: AD IN WHICH T-CELL EPITOPES ARE REDUCED
FILE REFERENCE: P-5202-US
CURRENT APPLICATION NUMBER: US/10/619,454
CURRENT APPLICATION NUMBER: US/0396,245
PRIOR FILING DATE: 2003-07-17
PRIOR FILING DATE: 2002-07-17
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Sequence 142, Application US/10619454

Publication No. US2005019639941

GENERAL INFORMATION:

APPLICANT: Schenk, Dale B.

APPLICANT: Bard, Frederique

APPLICANT: Vednock, Ted

TITLE OF INVENTION: Pervention and Treatment of Amyloidogenic Disease

TITLE OF INVENTION: Prevention and Treatment of Amyloidogenic Disease

FILE REFRENCE: 15270J-004750UC

CURRENT APPLICATION NUMBER: US/09/724,961

PRIOR FILING DATE: 2000-11-28

PRIOR FILING DATE: 2000-05-26

PRIOR FILING DATE: 1999-05-28

PRIOR FILING DATE: 1999-05-28

NAME/KEY: PEPTIDE

LOCATION: (17)..(21)

OTHER INFORMATION: The side chains of the amino acids at positions 17 and 21 are
COTHER INFORMATION: Linked together through an intramolecular bridge.

US-10-250-581-10
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               CCATION: (17)...(21)

FEATURE:
OTHER INFORMATION: Amyloid beta A4 precursor (APP, ABPP), isoform a, protease
OTHER INFORMATION: newind if (PN-II), creebral vascular amyloid peptide (CVAP),
OTHER INFORMATION: amyloid-beta protein, beta-amyloid peptide, A4 amyloid protein,
OTHER INFORMATION: Alzheimer's disease amyloid protein
FEATURE:
INFORMATION: (1)...(17)
OTHER INFORMATION: signal peptide
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            FEATURE:
NAME/KEY: PEPTIDE
LOCATION: (1)..(40)
OTHER INFORMATION: biomarker peptide 4320 Da (IMAC-Ni), A-beta 1-40
OTHER INFORMATION: peptide fragment of Amyloid beta A4 precursor
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                LOCATION: (672)...(711)
OTHER INFORMATION: biomarker peptide 4330 Da, fragment of Amyloid
OTHER INFORMATION: beta A4 precursor, beta-amyloid protein 40
